

Amendments to the Claims:

The following Listing of Claims will replace all prior versions, and listings, of claims the application:

- 1. (Canceled)
- 2. (Currently Amended) [The method of claim 1], <u>A method of sealing an enclosable container</u>, the method comprising:

positioning a sealant material within the enclosable container, wherein the

sealant material comprises a silicone gel and a microsphere filler

distributed within the silicone gel; and

closing the enclosable container to compress the sealant material, wherein the sealant material comprises a first portion and second portion, and wherein closure of the enclosable container compresses the first portion against the second portion.

- 3. (Original) The method of claim 2, wherein the first portion and the second portion each have an exposed-surface area and a side-surface area, wherein the exposed-surface area is smaller than the side-surface area, and wherein the exposed-surface area of the first portion contacts the exposed-surface area of the second portion.
- 4. (Currently Amended) The method of claim [1] 2, wherein the silicone gel comprises: about 60.0% to about 85.0% by weight of the silicone gel of an organopolysiloxane; about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and about 0.5% to about 6.0% by weight of the silicone gel of a hydrosiloxane.
- 5. (Original) The method of claim 4, wherein the silicone gel further comprises a platinum catalyst, or a derivative thereof.

Applicant: Carole Jego Stora

Serial No.: 10/770,095

Filed: Feb. 2, 2004 Docket No.: 59037US00

Title: MICROSPHERE-FILLE **MATERIALS** 

6. (Currently Amended) The method of claim [1] 2, wherein the microsphere filler comprises an expanded thermoplastic microsphere filler.

- 7. (Original) The method of claim 6, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material.
- 8. (Currently Amended) The method of claim [1] 2 wherein the sealant material further comprises a silica filler.
- The method of claim 8, wherein the silica filler constitutes about 1.0% to about 20.0% by weight of the sealant material.
- 10. (Original) The method of claim 8, wherein the silicone gel comprises: about 60.0% to about 85.0% by weight of the silicone gel of an organopolysiloxane; about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane;

and

about 0.5% to about 10.0% by weight of the silicone gel of a hydrosiloxane.

- 11. (Original) The method of claim 10, wherein the silicone gel further comprises a platinum catalyst, or a derivative thereof.
- 12. (Original) The method of claim 8, wherein the microsphere filler comprises an expanded thermoplastic microsphere filler.
- 13. (Original) The method of claim 12, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material and the silica filler constitutes about 1.0% to about 20.0% by weight of the sealant material.

Applicant: Carole Jego Stora Serial No.: 10/770,095

Filed: Feb. 2, 2004

Docket No.: 59037US002

Title: MICROSPHERE-FILLED SEALANT MATERIALS

14. (Original) A method of sealing an enclosable container having a component extending into the enclosable container, the method comprising:

positioning a sealant material within the enclosable container and adjacent to the component, wherein the sealant material comprises a silicone gel and a microsphere filler; and

closing the enclosable container to compress the sealant material around the component.

- 15. (Original) The method of claim 14 wherein the sealant material comprises a first portion and second portion, and wherein closure of the enclosable container compresses the first portion against the second portion around the component.
- 16. (Original) The method of claim 15, wherein the component comprises a cable.
- 17. (Original) The method of claim 14, wherein the first portion and the second portion each have an exposed-surface area and a side-surface area, wherein the exposed-surface area is smaller than the side-surface area, and wherein the exposed-surface area of the first portion contacts the exposed-surface area of the second portion.
- 18. (Original) The method of claim 14, wherein the silicone gel comprises: about 60.0% to about 85.0% by weight of the silicone gel of an organopolysiloxane;

about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and

about 0.5% to about 10.0% by weight of the silicone gel of a hydrosiloxane.

19. (Original) The method of claim 14, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material.

Applicant: Carole Jego Stora Serial No.: 10/770,095

Filed: Feb. 2, 2004

Docket No.: 59037US002

Title: MICROSPHERE-FILLED SEALANT MATERIALS

20. (Original) The method of claim 14, wherein the sealant material further comprises a silica filler.

21. (Original) The method of claim 20, wherein the silicone gel comprises:

about 60.0% to about 85.0% by weight of the silicone gel of an organopolysiloxane;

about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and

about 0.5% to about 10.0% by weight of the silicone gel of a hydrosiloxane.

22. (Original) The method of claim 20, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material and the silica filler constitutes about 1.0% to about 20.0% by weight of the sealant material.

23. (Canceled)

24. (Currently Amended) [The sealable device of claim 23] A sealable device comprising:

a container capable of being closed to define an interior portion;

a sealant material disposed within the interior portion, wherein the sealant

material comprises a silicone gel and a microsphere filler, and wherein

closure of the container is effective to compress the sealant material

and seal the container, wherein the container comprises a pair of cover

members adapted to fold together to close the container.

25. (Currently Amended) The sealable device of claim [23] <u>24</u>, wherein the sealant material comprises a first portion and second portion, and wherein closure of the container is effective to compress the first portion against the second portion.

Applicant: Carole Jego Stora

Serial No.: 10/770,095 Filed: Feb. 2, 2004

Docket No.: 59037US002

Title: MICROSPHERE-FILLED SEALANT MATERIALS

26. (Original) The sealable device of claim 25, wherein the first portion and the second portion each have an exposed-surface area and a side-surface area, wherein the exposed-surface area is smaller than the side-surface area, and wherein the exposed-surface area of the first portion contacts the exposed-surface area of the second portion.

27. (Currently Amended) The sealable device of claim [23] <u>24</u>, wherein the sealable device is adapted to receive a component that extends within the sealable device.

28. (Original) The sealable device of claim 27, wherein the sealant material provides a seal adjacent to the component.

29. (Currently Amended) The method of claim [23] <u>24</u>, wherein the silicone gel comprises:

about 60.0% to about 85.0% by weight of the silicone gel of an organopolysiloxane;

about 10.0% to about 40.0% by weight of the silicone gel of a vinyl siloxane; and

about 0.5% to about 10.0% by weight of the silicone gel of a hydrosiloxane.

- 30. (Original) The sealable device of claim 29, wherein the sealant material further comprises a silica filler.
- 31. (Original) The sealable device of claim 30, wherein the microsphere filler constitutes about 0.5% to about 10.0% by weight of the sealant material and the silica filler constitutes about 1.0% to about 20.0% by weight of the sealant material.
